

3/25/13

**Phylogenetic Analyses at the HPC Center**

Matt Gitzendanner magitz@ufl.edu  
Oleksandr Moskalenko om@hpc.ufl.edu

[UF Biocomputing](http://ufbiocomputing.ufl.edu) [www.ufl.edu](http://www.ufl.edu)

**Galaxy**

Galaxy / UF HPC

UNIVERSITY OF FLORIDA

The Galaxy interface shows a list of available tools and a workspace for managing data and results.

[UF Biocomputing](http://ufbiocomputing.ufl.edu) [www.ufl.edu](http://www.ufl.edu)

**Galaxy**

- RAxML
- Garli
- Beast
- TreeAnnotator

**Phylogenetics**

- RAxML – Maximum Likelihood based inference of large phylogenetic trees
- Garli phylogenetic inference using the maximum-likelihood
- Beast Bayesian MCMC analysis of molecular sequences.
- TreeAnnotator BEAST tree annotator.

[UF Biocomputing](http://ufbiocomputing.ufl.edu) [www.ufl.edu](http://www.ufl.edu)

RAXML (version 1.0.0)

Model Type: Nucleotide

Submission Model (-m): CTICAT

Random seed used for the parsimony inferences (-p): 1234567890

RAXML options to use:

Required options only: The two minimal settings are the input file and the substitution model. To specify extra options select the 'Full option list'

Sequence file (relaxed PHYLIP format) (-s): 1.dna.phy

Execute

[UF Biocomputing](http://ufbiocomputing.ufl.edu) [www.ufl.edu](http://www.ufl.edu)

The full RAxML options list is LONG!

[UF Biocomputing](http://ufbiocomputing.ufl.edu) [www.ufl.edu](http://www.ufl.edu)

**Galaxy: Data intensive biology for everyone**

- Accessible, reproducible, transparent computational biology
- galaxy.hpc.ufl.edu
  - Local instance of Galaxy
    - Faster access to storage, easier upload
    - Local compute resources
    - Local control

[UF Biocomputing](http://ufbiocomputing.ufl.edu) [www.ufl.edu](http://www.ufl.edu)

1

3/25/13

**Cluster basics**

User interaction  
Scheduler  
Compute resources

Login node (Head node)  
Tell the scheduler what you want to do  
Your job runs on the cluster

[UF Biocomputing](http://ufbiocomputing.ufl.edu) [www.ufl.edu](http://www.ufl.edu)

**Galaxy uses the scheduler too**

- RAxML and BEAST
  - nodes=1:ppn=8
  - pmem=1gb
  - walltime=166:00:00 (~7days)
- Let us know if these are too small

[UF Biocomputing](http://ufbiocomputing.ufl.edu) [www.ufl.edu](http://www.ufl.edu)

**Cluster basics**

User interaction  
Scheduler  
Compute resources

Login node (Head node)  
Tell the scheduler what you want to do  
Your job runs on the cluster

[UF Biocomputing](http://ufbiocomputing.ufl.edu) [www.ufl.edu](http://www.ufl.edu)

**Running RAxML**

```
raxmlHPC-PTHREADS-SSE3 -f a -m GTRGAMMA -s dna.phy
-p 12345 -x 12345 -N 100 -n dna -T 4
```

A standard RAxML command

[UF Biocomputing](http://ufbiocomputing.ufl.edu) [www.ufl.edu](http://www.ufl.edu)

**Running RAxML**

```
#!/bin/bash #Put it in a file and make it a bash script

raxmlHPC-PTHREADS-SSE3 -f a -m GTRGAMMA -s dna.phy
-p 12345 -x 12345 -N 100 -n dna -T 4
```

[UF Biocomputing](http://ufbiocomputing.ufl.edu) [www.ufl.edu](http://www.ufl.edu)

**Running RAxML**

```
#!/bin/bash
module load raxml
raxmlHPC-PTHREADS-SSE3 -f a -m GTRGAMMA -s dna.phy
-p 12345 -x 12345 -N 100 -n dna -T 4
```

Use the HPC's module system to make life easier—don't need to worry about PATHs

[UF Biocomputing](http://ufbiocomputing.ufl.edu) [www.ufl.edu](http://www.ufl.edu)

2

### Running RAxML

```
#!/bin/bash
#PBS -M dgeitz@ufl.edu
#PBS -e abc.out
#PBS -o RAxML.out
#PBS -e RAxML_err
#PBS -l nodes=1:ppn=4
#PBS -l pmem=1gb
#PBS -l walltime=05:00:00
cd $PBS_O_WORKDIR
module load raxml
raxmlHPC-PTHREADS-SSE3 -f a -m GTRGAMMA -s dna.phy \
-p 12345 -x 12345 -N 100 -n dna -T 4

```

Add information for the scheduler:  
-M email address  
-m when to email about begin/end  
-o output file name  
-e error file name  
-l number of nodes and cores to use  
-p per processor memory request  
-t how long will job take

Change to the directory from which the job was submitted (not \$HOME)

UF bioinformatics 101 homepage www.ufl.edu

### Running RAxML

```
#!/bin/bash
#PBS -M dgeitz@ufl.edu
#PBS -e abc.out
#PBS -o RAxML.out
#PBS -e RAxML_err
#PBS -l nodes=1:ppn=4
#PBS -l pmem=1gb
#PBS -l walltime=05:00:00
cd $PBS_O_WORKDIR
module load raxml
raxmlHPC-PTHREADS-SSE3 -f a -m GTRGAMMA -s dna.phy \
-p 12345 -x 12345 -N 100 -n dna -T $PBS_NP

```

Make use of some other PBS and environment variables

UF bioinformatics 101 homepage www.ufl.edu

### Scheduling a job

Need to tell scheduler what you want to do

- How many CPUs you want and how you want them grouped
- How much RAM your job will use
- How long your job will run
- The commands that will be run

**Scheduler**  
Tell the scheduler what you want to do

UF bioinformatics 101 homepage www.ufl.edu

### Nodes and processors

```
#PBS -l nodes=1:ppn=4
#PBS -l nodes=2:ppn=8
```

UF bioinformatics 101 homepage www.ufl.edu

### Heterogeneous cluster

- There is a wide mix of nodes on the cluster
  - From 4 cores per node
  - To many with 12-16 cores
  - UFC-16x cores, 64 cores/node
- The more ppn you ask for, the smaller the pool of nodes that can service your job

UF bioinformatics 101 homepage www.ufl.edu

### Nodes and processors

```
#PBS -l nodes=1:ppn=4
  • Threaded or MPI
#PBS -l nodes=2:ppn=8
  • MPI only
```

Some preliminary studies to see what core application scales: 12 processors faster than 48; 64 faster than 128

UF bioinformatics 101 homepage www.ufl.edu

### RAM

#### #PBS -l pmem=900mb

- Lot's to consider, but do your best at estimating RAM needed for job
- Over about 3GB of RAM, "costs" toward CPU allocation

Wasted RAM leads to idle CPUs and low job throughput

UF bioinformatics 101 homepage www.ufl.edu

### Processor Equivalents

- Accounts for large RAM requests
- Average ~3GB RAM/core

1 core, 10GB RAM:	-3 PEs
1 core, 40GB RAM:	-18 PEs

- Non-investors limit: 8 PEs
- Investor limits are based on PEs

UF bioinformatics 101 homepage www.ufl.edu

### Walltime

#### #PBS -l walltime=00:50:00

- Fairly straight forward
- As with all resource requests, accuracy helps ensure **your** jobs and all other jobs will run sooner

	Maximum	Short	Long
Investor	31 days	<12 hrs	7 days
Other	7 days	<12 hrs	3 days

**Scheduler**  
Tell the scheduler what you want to do

UF bioinformatics 101 homepage www.ufl.edu

### RAxML 7.3.2

- raxml-SSE3 Let us know if you need this.
- Single threaded

#### raxml-PTHREADS-SSE3

- Multi-threaded, all on one node
- E.g.: nodes=1:ppn=8

#### raxml-HYBRID-SSE3

- MPi and multi-threaded, span multiple nodes
- E.g.: nodes=4:ppn=8

UF bioinformatics 101 homepage www.ufl.edu

### ExaML

Exascale Maximum Likelihood code for phylogenetic inference using MPI

```
#PBS -l nodes=2:ppn=12
#PBS -l pmem=1gb
#PBS -l walltime=24:00:00
module load intel openmpi examl
spikes examl -s data/part.binary -n data -m PSR \
-t starting.tree -x checkpoint -s -Q
```

Can all be on one node: nodes=1:ppn=12

- Need to convert .phy into binary file:
- parser -o data.phy -m DNA -q partition.txt
- Need a starting tree—RAxML:

```
raxmlHPC-PTHREADS-SSE3 -y -o GINCAT -o data.phy -p 1234 -o starting.tree
```

UF bioinformatics 101 homepage www.ufl.edu

### MrBayes 3.2.1

**mrbayes**

- mb—single threaded
- E.g.: nodes=1:ppn=1

**intel openmpi mrbayes**

- mb—MPI version
- Can span multiple nodes
- But doesn't need to: **nodes=1:ppn=8 is much preferred to nodes=8:ppn=1**
- Faster for your job, fewer points of failure, doesn't partially occupy lots of nodes
- To run: mpiexec mb test.nex

UF bioinformatics 101 homepage www.ufl.edu

**GARLI**

- ▶ For single ML search
  - Single threaded
  - Multi-threaded, probably not worth it
- ▶ For bootstrap
  - MPI, splits each replicate onto a processor

[UF hpc.ufl.edu/garli](http://ufhpc.ufl.edu/garli) [www.ufl.edu](http://www.ufl.edu)

**Others (see wiki)**

- ▶ BayesRate (speciation/extinction rates)
- ▶ BEAST (Bayesian dating)
- ▶ ETE2 (python module for tree manipulation)
- ▶ HyPhy (phylogenetics, molecular evolution, machine learning)
- ▶ PartitionFinder (Best fit partitioning scheme)
- ▶ PhyML (ML)
- ▶ RADICAL (Phylogenomic)
- ▶ SATe (simultaneous alignment & inference)
- ▶ SPIMAP (Bayesian gene tree)
- ▶ TreeFix (Gene tree/species tree)

[UF hpc.ufl.edu/others](http://ufhpc.ufl.edu/others) [www.ufl.edu](http://www.ufl.edu)

**Training Schedule**

- ✓ Jan 14: Intro to UFHPC, getting started
- ✓ Jan 28: The Linux/Unix Shell - An Introduction
- ✓ Feb 4: Running Jobs, Submission Scripts, Modules
- ✓ Feb 11: Dr. Dhruba Chakravorty: Amber
- ✓ Feb 18: Galaxy Overview, The Basics
- ✓ Feb 25: Dr. David Ostrov: Molecular Docking
- ✓ Mar 11: NGS Data Techniques: General Methods and Tools
- ✓ Mar 18: NGS: Reference Based Mapping & de Novo Assembly
- ✓ Mar 25: Phylogenetic Analyses
- ▶ Apr 1: Multiprocessing of the HPC Center
- ▶ Apr 8: Introduction to GPU nodes
- ▶ Apr 15: Tentative: Overview of the new cluster and storage
- ▶ Apr 22:
- ▶ May 2: Spring 2013 Research Computing Day (noon-4pm)

[UF hpc.ufl.edu/training](http://ufhpc.ufl.edu/training) [www.ufl.edu](http://www.ufl.edu)
